Social Media Integration

Facebook activity feeds may be integrated into the inLeague login page. To add your league's facebook feed:

- Your league must have a facebook 'page' - you cannot use a personal facebook account. For directions on creating a facebook page, see facebook's creating a page documentation.
- Your facebook page must be published, and publicly accessible.
- You may control whether or not posts made to your page are visible in the feed by restricting visibility of posts on your facebook page's settings.
- **Find your Facebook page's URL:** When you first set up a Facebook page, it will have a long URL that looks something like this: https://www.facebook.com/pages/My-Facebook-Page-Name/1232532525306920 - you can use this URL, but we recommend selecting **update page info** on your league's facebook page and selecting a **facebook web address** - this is a custom name for your page that is easier to remember and unique to your league. Once you select one, your URL will instead look like **https://www.facebook.com/MyLeaguePageName -** or, in inLeague's case, https://www.facebook.com/InLeagueDotOrg - much easier to remember!
- Whether or not you enter a custom web address, select and copy your facebook page's URL (the text in your browser's address bar when you first navigate to your league's page) and navigate to inLeague's **Control Panel** under the **Administrators** menu. Under the **Social Media Integration** section, enter the entire URL (beginning with **HTTPS://**) in the field and select **Update Settings**.

Your league's facebook page will now appear alongside inLeague's feed on the welcome/splash page for inLeague!
